Research Interests

o Generative Modeling: addressing multimodal grounding, translation, alignment, fusion, and low-resource learning.

o **Virtual Presence:** multimodal virtual agents with natural verbal (i.e., speech, language, spatial audio) and nonverbal behaviours (i.e., hand gestures, facial expressions, body pose) for remote interaction, education and collaboration

o Social Intelligence: multimodal embodied agents that can perceive and interact with humans in real or virtual environments

PhD Thesis Research

Communication beyond words: Grounding Visual Body Motion with Language

Carnegie Mellon University, Prof. Louis-Philippe Morency

o **Multimodal Grounding:** Constructed a common embedding space for language, acoustics and human body pose for the purposes of co-speech gesture generation.

o **Gesture Style Transfer and Control:** Proposed a many-to-many gesture style transfer set-up and designed efficient approaches to transfer the idiosyncratic gesture styles of one speaker to another speaker.

o **Low-Resource Generative Models:** Designed approaches to generate co-speech gestures for new speakers with significantly lesser supervision.
